

## Day 3 - 1/19/2024

### Dot Product

Suppose we have the vectors  $\vec{a} = \langle a_x, a_y, a_z \rangle$  and  $\vec{b} = \langle b_x, b_y, b_z \rangle$ .

Define  $\vec{a} \cdot \vec{b} = a_x b_x + a_y b_y + a_z b_z$ . Dot Products produce scalar values.

Example:

$$\vec{a} = \langle 1, 2, 0 \rangle \quad \vec{b} = \langle 7, 5, 7 \rangle$$

$$\vec{a} \cdot \vec{b} = 1(7) + 2(5) + 0(7) = 7 + 10 + 0 = \underline{17}$$

Properties:

- Commutivity/Symmetry:  $\vec{a} \cdot \vec{b} = \vec{b} \cdot \vec{a}$
- Linearity:  $\vec{a}, \vec{b}, \vec{c}$  - Vectors,  $r, s$  - Scalars

$$(\vec{a} + \vec{b}) \cdot \vec{c} = \vec{a} \cdot \vec{c} + \vec{b} \cdot \vec{c}$$

$$\vec{a} \cdot (\vec{b} + \vec{c}) = \vec{a} \cdot \vec{b} + \vec{a} \cdot \vec{c}$$

Possible if  $r = 0$

$$(s\vec{a}) \cdot \vec{b} = s(\vec{a} \cdot \vec{b}) = \vec{a} \cdot (s\vec{b})$$

$$(s\vec{a} + r\vec{b}) \cdot \vec{c} = s(\vec{a} \cdot \vec{c}) + r(\vec{b} \cdot \vec{c})$$

- Length:  $\vec{a} \cdot \vec{a} = \|\vec{a}\|^2$

$$\vec{a} = \langle 1, 4, 5 \rangle; \vec{b} = \langle 3, 0, 2 \rangle, \vec{c} = \langle 1, 7, 7 \rangle$$

$$(\vec{a} \cdot \vec{b})\vec{c} = (3 + 0 + 10)\vec{c} = 13\vec{c} = \langle 13, 91, 91 \rangle$$

### Angles between Vectors

Suppose we have two vectors  $\vec{a}$  and  $\vec{u}$  and we want to find the angle between the two.

1. Find  $\vec{v} - \vec{u}$ .
2. Use the *Law of cosines*.

$$\|v - u\|^2 = \|u\|^2 + \|v\|^2 - 2(\|u\| \cdot \|v\|) \cos \alpha$$

$$(v - u) \cdot (v - u) = v \cdot (v - u) - u \cdot (v - u)$$

$$v \cdot v - v \cdot u - u \cdot v + u \cdot u$$

$$\text{since } u \cdot v = v \cdot u : \|v\|^2 - 2u \cdot v + \|u\|^2$$

$$\|u\|^2 + \|v\|^2 - 2 \|u\| \|v\| \cos \alpha = \|v\|^2 - 2(u \cdot v) + \|u\|^2$$

$$u \cdot v = \|u\| \|v\| \cos \alpha$$

$$\cos \alpha = \frac{u \cdot v}{\|u\| \|v\|}$$

$$\alpha = \arccos \left( \frac{u \cdot v}{\|u\| \|v\|} \right)$$

Properties:

$u, v$  - Vectors;

$$u \cdot v > 0 \Rightarrow \alpha < 90^\circ$$

$$u \cdot v = 0 \Rightarrow \alpha = 90^\circ \text{ (given } u \text{ and } v \text{ are not } \vec{0} \text{)}; u \perp v$$

$$\text{if } \vec{a} \parallel \vec{b} \Rightarrow \vec{a} = k\vec{b} \text{ where } k \in \mathbb{R}$$

$$a \cdot b = kb \cdot b = k \|b\|^2$$

$$\|a\| \cdot \|b\| = |k| \|b\|^2$$

## Orthogonal Projections

Define a vector  $\vec{d} \perp \vec{a}$  where  $\vec{d}$  is the project of  $\vec{b}$  onto  $\vec{a}$  and  $c \cdot \vec{d} = \vec{a}$ .

$$\vec{b} = c \cdot \vec{a} + \vec{d}$$

$$\vec{a} \cdot \vec{b} = c \vec{a} \cdot \vec{a} + \vec{d} \cdot \vec{a}$$

$$\vec{a} \cdot \vec{b} = c \, \|a\|^2$$

$$\text{proj}_{\vec{a}} \vec{b} = \frac{\vec{a} \cdot \vec{b}}{\|a\|^2}$$
