Homework Set III, Due Friday, January 27th, 2023

1. Evaluate $\int_1^e \frac{(1+\ln(x))^2}{x}\mathrm{d}x$

$$\text{let} \quad u = \ln x + 1 \quad \mathrm{d}u = \frac{1}{x}\mathrm{d}x$$
$$u_{lower} = \ln(1) + 1 = 1 \quad u_{upper} = \ln(e) + 1 = 2$$
$$\Rightarrow \int_1^2 u^2 \mathrm{d}u = \left.\frac{u^3}{3}\right|_1^2 = \frac{2^3 - 1}{3} = \boxed{\frac{7}{3}}$$

2. Evaluate $\int \frac{\mathrm{d}x}{\sqrt{25-x^2}}$

$$\text{Using} \quad a^2 - u^2 \implies u = a\sin\theta \quad -\frac{\pi}{2} < \theta < \frac{\pi}{2}$$
$$\Rightarrow x = 5\sin\theta \quad \mathrm{d}x = 5\cos\theta \mathrm{d}\theta \quad \theta = \sin^{-1}\left(\frac{x}{5}\right)$$
$$\int \frac{5\cos\theta \mathrm{d}\theta}{\sqrt{25 - 25\sin^2\theta}} = \int \frac{\cancel{5}\cos\theta \mathrm{d}\theta}{\cancel{5}\sqrt{1 - \sin^2\theta}} = \int \frac{\cos\theta \mathrm{d}\theta}{\sqrt{\cos^2\theta}}$$
$$= \int \frac{\cos\theta \mathrm{d}\theta}{\cos\theta} = \int \mathrm{d}\theta = \theta + C = \boxed{\sin^{-1}\left(\frac{x}{5}\right) + C}$$

3. Evaluate $\int \frac{\mathrm{d}x}{\sqrt{25+4x^2}}$

$$\text{Using} \quad a^2 + u^2 \implies u = a\tan\theta \quad -\frac{\pi}{2} < \theta < \frac{\pi}{2}$$
$$\Rightarrow 2x = 5\tan\theta \quad \mathrm{d}x = \frac{5}{2}\sec^2\theta \mathrm{d}\theta \quad \theta = \tan^{-1}\left(\frac{2x}{5}\right)$$
$$\int \frac{\frac{5}{2}\sec^2\theta \mathrm{d}\theta}{\sqrt{25 + 25\tan^2\theta}} = \frac{5}{2}\int \frac{\sec^2\theta \mathrm{d}\theta}{5\sqrt{1 + \tan^2\theta}} = \frac{1}{2}\int \frac{\sec^2\theta \mathrm{d}\theta}{\sqrt{\sec^2\theta}}$$
$$= \frac{1}{2}\int \sec\theta \mathrm{d}\theta = \frac{1}{2}(\ln|\sec\theta + \tan\theta|) + C$$
$$= \frac{1}{2}\left[\ln\left|\sec\left(\tan^{-1}\left(\frac{2x}{5}\right)\right) + \tan\left(\tan^{-1}\left(\frac{2x}{5}\right)\right)\right|\right] + C = \boxed{\frac{1}{2}\left[\ln\left|\sec\left(\tan^{-1}\left(\frac{2x}{5}\right)\right) + \frac{2x}{5}\right|\right] + C}$$

4. Evaluate $\int \frac{e^x}{1+e^{2x}}$

$$\text{Using} \quad a^2 + u^2 \implies u = a\tan\theta \quad -\frac{\pi}{2} < \theta < \frac{\pi}{2}$$
$$\Rightarrow e^x = \tan\theta \quad e^x\mathrm{d}x = \sec^2\theta \mathrm{d}\theta \quad \theta = \tan^{-1}(e^x)$$
$$\int \frac{\sec^2\theta \mathrm{d}\theta}{1 + \tan^2\theta} = \int \frac{\sec^2\theta \mathrm{d}\theta}{\sec^2\theta} = \int \theta \mathrm{d}\theta = \theta + C = \boxed{\tan^{-1}(e^x) + C}$$

5. Find the area between the curves: $y = x^2 + 1$ and $y = x + 1$

$$\begin{aligned} x + 1 &= x^2 + 1 \\ x - x^2 &= 0 \\ x(1 - x) &= 0 \\ x &= (0, 1) \end{aligned}$$

$$\int_0^1 (x - x^2)\mathrm{d}x$$
$$= \left.\left(\frac{x^2}{2} - \frac{x^3}{3}\right)\right|_0^1 = \frac{1}{2} - \frac{1}{3} = \frac{3 - 1}{6} = \boxed{\frac{1}{6}}$$
