Let X be a continuous random variable ith the pdf given by:

$$f(x) = \begin{cases} 0 & \text{if } x \le 0\\ 1/4 & \text{if } 0 < x \le 1\\ 0 & \text{if } 1 < x \le 2\\ 3/8 & \text{if } 2 < x \le 4\\ 0 & \text{if } 4 < x \end{cases}$$

1. Sketch the graph of f(x).

2. Show that f(x) is a pdf.

Because the sections are rectangular, we can just sum their width * height:

$$(0 \cdot -\infty) + \left(\frac{1}{4} \cdot 1\right) + (0 \cdot 1) + \left(\frac{3}{8} \cdot 2\right) + (0 \cdot \infty) = 0 + \frac{1}{4} + 0 + \frac{3}{4} + 0 = \frac{4}{4} = 1$$

Because the sum of the "integrals" is 1, f(x) is a pdf.

3. Find F(x), the cdf of X. Sketch its graph. (The sketch can be fairly crude, but be sure to show what happens at x = 0, 1, 2, 4. In particular, the cdf, F(x), is continuous because X is a continuous random variable, so there are no jumps in the cdf. It is continuous as well.)

$$F(X) = \int_{-\infty}^{x} f(t)dt$$

$$= \begin{cases} \int_{-\infty}^{0} 0dt \\ \int_{0}^{1} 1/4dt \\ \int_{1}^{2} 0dt \\ \int_{2}^{4} 3/8dt \\ \int_{4}^{\infty} 0dt \end{cases}$$

$$= \begin{cases} 0 & \text{if } 0 < x \\ \frac{x}{4} & \text{if } 0 < x \le 1 \\ \frac{1}{4} & \text{if } 1 < x \le 2 \\ \frac{3(x-2)}{8} + \frac{1}{4} & \text{if } 2 < x \le 4 \\ 1 & \text{if } 4 < x \end{cases}$$

$$1.2$$

$$0.8$$

$$0.6$$

$$0.4$$

$$0.2$$

$$0.2$$

$$0$$

$$1 & 2$$

$$3 & 4$$

$$5$$

- 4. Use the cdf to find the following probabilities:
 - (a) $P(X \le 2.4)$

$$P(X \le 2.4) = \frac{3(2.4 - 2)}{8} + \frac{1}{4}$$

$$F(2.4) = \frac{3(0.4)}{8} + 0.25$$

$$= \frac{1.2}{8} + 0.25 = \boxed{0.65}$$

(b) $P(0.7 \le X \le 1.0)$

$$P(0.7 \le X \le 1.0) = 1 - F(0.7)$$

$$= 1 - \frac{0.7}{4}$$

$$= 1 - 0.175 = \boxed{0.825}$$

(c) P(x > 2.5)

$$P(X > 2.5) = 1 - F(2.5)$$

$$= 1 - \frac{3(2.5 - 2)}{8} + 0.25$$

$$= 1 - \frac{3(0.5)}{8} + 0.25$$

$$= 1 - \frac{1.5}{8} + 0.25$$

$$= 1 - 0.1875 + 0.25 = \boxed{4375}$$

(d) $P(0.3 \le X \le 3.5)$

$$P(0.3 \le X \le 3.5) = F(3.5) - F(0.3)$$

$$= \left(\frac{3(3.5 - 2)}{8}\right) - \frac{0.3}{4}$$

$$= \left(\frac{3(1.5)}{8}\right) - 0.075$$

$$= \left(\frac{4.5}{8}\right) - 0.075$$

$$= 0.5625 - 0.075 = \boxed{0.4875}$$
